At Work For You®

BRAND > **SAFWAY**®

Our expertise – your global partner

Every project and work environment is unique. As a result you need a reliable specialist who provides both the smartest solutions and safest conditions. SGB BrandSafway India has the expertise to successfully deliver your maintenance needs and disciplines.

With SGB BrandSafway India all your requirements are under one roof:

- › Insulation
- › Scaffolding & Suspended Access
- › Roof-Sheeting & Cladding Services
- › Fireproofing
- › Industrial Painting & Specialized Coatings
- › Cathodic Protection

We have all the required resources and our qualified technicians carry out work with strict planning and on-site expertise. But most importantly, every task has safety as a key driver for our success and our customers.

SGB BrandSafway India belongs to BrandSafway and is a leading global industrial service provider. Thanks to our vast geographical presence, along with both the broad range of services offered and the technical expertise present, we are able to offer our customers high quality services and solutions.

Collaboration is the key to our mutual success. Working together, we strive for leadership in the field of safety and by providing detailed work plans, aim to deliver the most effective and productive solution to your project requirements.

SGB BrandSafway India

- › Team of 3,500+ People in India
- › ISO 9001, 45001, OHSAS 18001 & STI certified
- › In-house Training Facilities
- › Gender Diversity Drive
- › In-house Design Facilities

“We aim to provide the smartest solutions and safest conditions. Your success is our passion”

About BrandSafway

- › Leading global provider of access, specialized services, and forming and shoring solutions to the industrial, commercial and infrastructure end markets
- › More than 360 locations all over the world
- › Portfolio company of Clayton, Dubilier & Rice (CD&R) & Brookfield
- › International brands include; Aluma Systems, Brand, Hünnebeck, Lyndon SGB, Mastclimbers, SGB and Taylor's Hoists.

Key markets

› Oil and Gas

Daily, hundreds of our technicians carry out maintenance work for renowned clients on oil & gas platforms. We provide innovative solutions to save time and critical resources during turnarounds, maintenance projects, capital work and emergencies in the upstream, midstream and downstream industries.

› Chemical and Petrochemical

Our multidisciplinary approach enables us to marshal and coordinate a whole spectrum of skills, expertise and operatives, and to guarantee the timely implementation of scheduled maintenance programmes. We always work in close partnership with operating management to provide world-leading standards of safety.

› Power and Renewable Energy

We have comprehensive, international experience and expertise in the construction and maintenance of major energy facilities through every phase of its life-cycle from commissioning to decommissioning and the life of the plant in between. From low-rise gas-fired power plants and waste-to-energy (WTE) incineration plants, to high-rise nuclear, biomass plants and netted transmission line crossings to sources of renewable energy we have the experience required throughout the energy market.

› Offshore and Maritime

Offshore Oil and gas production is an ongoing operation, 24 hours a day, 7 days a week, in some of the world's most hostile environments. Our specially trained operatives support some of the world's most renowned clients in this field, ensuring that your operations continue safely, smoothly and with minimum costly downtime.

Key markets

› Civil and Infrastructure

From bridges, railroads and power distribution to airports, stadiums and arenas, we provide high quality, safe and productive solutions for maintenance, repair and capital projects. We work together with the client and other contractors on risk management. Our technicians work in accordance with the guidelines applicable to infrastructure activities.

› Metals and Minerals

Our teams are well aware of the logistical challenges on any production site and bring exceptional experience in providing effective service. In large industrial areas, there may be considerable distances to cover between the various plant sites, including coke ovens, pellet and sinter plants, blast furnaces, steel plants, hot and cold strip mills and gas holders. Our expertise in logistical planning ensures the most effective and timely delivery of materials and deployment of operatives to different factories.

› Food and Pharmaceuticals

Our industry knowledge and experience help establish the compliance parameters that will govern our procedures, and choice of materials and tools for safe and hygienic plant installation, maintenance, review or repair.

› Manufacturing and Processing

Process plants around the world share a common requirement for safe and efficient access to facilitate construction and ongoing fabric maintenance. Each plant and facility has its own specialist needs and we can supply a dedicated, site-based team, on a long-term basis.

#moresafety – first and foremost

At SGB BrandSafway India, safety comes first, always. Our absolute commitment to a safe work environment is at the heart of our business and operating system and our comprehensive and in-depth safety policies, systems and programmes are designed to engage the entire workforce in the delivery of safe work on all our projects.

We all work hard to ensure our employees come home in the same or better shape every day and that no one gets hurt, ever. With this value as the focus of our industry-leading safety culture, coupled with our award-winning safety record, we have come to know that we are more than a company with a great safety program, we are a safe company.

“Safety is central to
everything we do”

#moresafety – first and foremost

We drive a safety culture by continuously improving our safety performance.

In-depth policies, systems and programs engage the entire workforce in the delivery of safe work on all projects and prepare us for the future with our social values.

Employee Intervention System

Identifies potential hazards to **stop accidents before** they happen.

Supervisor Observation System

Peer-to-peer observation and review promotes **proactive ownership, accountability and positive leadership** development at supervisor level.

Management Safety Reviews

Engage management to **develop and promote safety leadership** in the field.

Gold Link Audit System

Through **inspection, interview and documentation review**, action items are assigned and delegated to responsible parties and **tracked**.

BRAND SAFWAY Learning Network

Web-based Learning Management System for **compliance, regulatory, craft & career path training and education**.

Products & services

Scaffolding

We are a specialist in access and scaffolding solutions and our qualified technicians have been building access platforms in all shapes and sizes for decades. Our internal Engineering department evaluates sophisticated structures and supplies reliable and safe drawings and calculations. Our international structure offers great potential for materials and technicians to be mobilised where required. Access to a global inventory of materials to service local market circumstances as required to meet our customer needs.

Suspended Access

The modular platform design of the QuikDeck® Suspended Access System can be assembled from just a few basic components and configured to fit almost any shape or size. There are no uneven work surfaces to navigate, so crews can work quickly and safely. QuikDeck® can be built “in the air” or on the ground and then hoisted into position.

TOTAL ACCESS SOLUTIONS

We are a specialist in the field of providing a “Total Access” solution. As soon as the customer's requirements have been mapped out, we advise and supply the most efficient working at height method using our wide range of products. An industrial site is not by default ‘built up’ with scaffolding. One situation may be more suitable using a mobile elevated work platform and another suspended access. This method of product selection contributes towards a reduction of associated costs – with additional increased quality and safety benefits.

The “Total Access” concept is supported by our online tool the “Managed Access Program (M.A.P.)”, where users can find advice and guidance regarding the most suitable access application for each individual project.

PROTECTING YOUR ASSETS AGAINST CORROSION

We offer high quality solutions for today's corrosion requirements. Providing a full range of integrity solutions, including; project management, technical support, coatings inspection & application, surface preparation, access solutions, insulation, fire protection and composite repair technology. Our blasting and coating solutions are not only available on site, but can be carried out in a controlled environment at our premises to avoid disruption to your operations.

Products & services

Insulation & Cladding

We manage the entirety of the design, calculations, execution and maintenance processes of thermal and acoustic insulation. For temperature control, we insulate cryogenic installations from -196 °C to +1000 °C with materials such as polymers, elastomers and natural stone wool products. All materials comply with current standards and safety requirements. For creating a quieter working environment, including the placement of housings, screens, dampers and baffles, we have our own workshops able to supply customised solutions using our own sound analyses and designs.

Painting & Coating

Our specialist surface preparation and protective coatings teams work to extremely exacting standards, using the latest technology to deliver advanced solutions to customers. An extensive range of anti-corrosive resistant primers, build up coats and finishes are available to produce excellent standards of protection for steel and most metal surfaces, also in the harshest environments and for a wide variety of high demanding clients. Before applying protective coatings, we select the most suitable cleaning and pre-treatment techniques – from conventional blasting to hydro jetting, wet blasting, induction stripping to various dust free (vacuum) blast solutions.

Roof-sheeting

We specialize in delivering top-notch roof sheeting solutions that combine functionality, aesthetics, and sustainability. With a legacy of excellence, we have established ourselves as the trusted choice for roof sheeting services in India. From traditional roofing materials to the latest innovations, we have the expertise to handle all your roofing needs.

Fireproofing & Fire Stop

Our fireproofing system has been specially developed to prevent the risk of fire spreading. We map out all transits in a building and ensure the correct level of insulation safety. After this, an annual inspection is carried out. During these checks, existing transits are approved and upgraded where necessary and new transits are secured. We also take care of fireproofing by putting fire resistant mortar on plinths and weight-bearing constructions.

Refractory & Cathodic Protection Services

Our specialists & supervisors are experts in all phases of refractory construction including: turnarounds, maintenance and new construction. We offer the full range of cathodic protection – condition surveying, engineering and installation.

#moreproductivity

We focus on process optimization, knowledge-sharing and productivity as a continued part of our growth with customers.

We constantly learn from 'best practices' across our teams and implement optimized processes in the field of scheduling, work preparation, administration, customer contact and operations.

Our focus is increasingly on digitization, aimed specifically at simplifying work processes and offering transparency to contracting parties. New applications are always being developed to support processes throughout the supply chain, from onboarding to invoicing and after-services.

Our global teams bring a wealth of knowledge and experience working on major projects to develop and deliver advanced solutions to our customers. Our expertise in the design, calculation and drawing of complex requirements guarantee you a safe and efficient workplace.

“We focus on improving safety, increasing productivity and managing costs”

Project management

Our integrated service approach starts with experience in organisation and planning.

Shutdowns and turnarounds

We carry out many different activities for a production stoppage, including;

- › erection & removal of scaffold and access
- › application, replacement & removal of sheeting, insulation and cladding
- › blasting, painting & coating
- › inspections & specialist services

We do all we can to mutually coordinate the different phases with other on-site trades and the customer – ensuring that the production can be restarted in good time. After all, stagnation costs money! We have a clear coordination point, both internally and externally, from which we organise and manage all activities. Furthermore, we work with a maintenance team of experienced and properly coordinated staff. A strict and well-disciplined approach means that we can guarantee a production stoppage never lasts longer than absolutely necessary.

New construction

We are often involved with new construction on industrial sites at an early stage supplying formwork and shoring services for civil engineering activities. We design and deliver efficient solutions for different

concrete thicknesses and shoring heights within to a project. In the next construction phase we supply access, insulation and fireproofing services for the various installation and structural activities. This is then followed by the ongoing maintenance of the facility.

Systematic maintenance

Together with our clients, we develop multi-year maintenance plans in which an indication is given of which maintenance is necessary. The systematic maintenance approach prevents ad-hoc solutions and results in manageable maintenance costs.

Moreover, energy consumption costs can be reduced and CUI risks are identified in a timely manner. Our multi-disciplinary approach enables us to coordinate the different disciplines and activities properly so that a maintenance programme will run according to plan. Working closely with customers to be mutually leading in the field of safety.

**“It starts with
strict planning”**
